Dear Tetsuo:

It was good to hear from you and of your safe arrival. I knew beforehand that you would have a splendid time.

Clive Spicer has been getting some very peculiar results with a certain transduction strain. The history was:

Td x- abony → i:enx . This x- abony → b:enx

Anyhow, he now claims that very old cultures of the b:enx will give back b:l.2 and i:enx when selected with enx or b serum. He has had the result with only a single culture, and of course it might be an exceptional heterogenote. He wrote to ask me to send him some old transductions, which I have, and he may possibly write you again for more. If so I hope you will comply.

We are beginning our preparations for leaving. It would be very nice to see you en route: you can keep in touch with my brother for last minute plans.

The Genetics Society notice that just came is enclosed.

Sincerely,

Joshua Lederberg
